Mini Project Case Study

JavaScript Executor Usage

Problem statement: Automate the scenario using JavaScript executor.

Register the user to the website using JavaScript executor.

Detailed Description:

Launch the browser.

Open the url.

Generate alert "hello world" by clicking on "Basic Alert".

Close the alert.

Navigate to different webpage: https://stqatools.com/demo/

Fill the name as "Amol"

Fill the personal address as "Mumbai"

Select proper gender.

Select your hobby.

Select any city.

Select any country.

Select your date of birth.

Scroll the page to the bottom.

Click on "submit"

Verify submission is successful or not.

Close the browser.

Program:

package SeleniumPractice;

import java.util.List;

import java.util.concurrent.TimeUnit;

import org.openqa.selenium.WebDriver;

```
import org.openqa.selenium.WebElement;
import org.openqa.selenium.edge.EdgeDriver;
import org.openqa.selenium.interactions.Actions;
import org.openqa.selenium.support.ui.Select;
public class Miniproject {
        public static void main(String[] args) throws InterruptedException {
                 // TODO Auto-generated method stub
                 System.setProperty("webdriver.edge.driver","C:\\Users\\2317693\\eclipse-
workspace\\CSDQEA24SD002\\Browser\\msedgedriver.exe");
                 WebDriver driver=new EdgeDriver();
                 driver.manage().window().maximize();
                 driver.get("https://www.stqatools.com/demo/Alerts.php");
                 System.out.println("Current URL: " + driver.getCurrentUrl());
                 driver.manage (). timeouts (). implicitly Wait (10, Time Unit. SECONDS);\\
                 //generate alert "hello world" by clicking on "basic alert"
                 Thread.sleep(3000);
                 WebElement btn=driver.findElement(By.id("btnAlert"));
                 btn.click();
                 Thread.sleep(3000);
                 WebElement btnClse=driver.findElement(By.xpath("//*[@id='ezAlerts-footer']/button"));
                 btnClse.click();
                 //Navigate to diff webpage
                 Thread.sleep(5000);
                 driver.navigate().to("https://stqatools.com/demo/Register.php");
          //Title of the page
          System.out.println("Title of the Webpage:" + driver.getTitle());
          System.out.println("After navigation Current URL is: " + driver.getCurrentUrl());
```

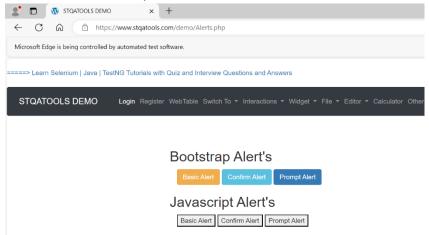

```
//Name Of the person
      Thread.sleep(3000);
      WebElement name = driver.findElement(By.name("name"));
       name.sendKeys("Amol");
      System.out.println("Name:"+name.getAttribute("value"));
      //Address of the person
      Thread.sleep(2000);
      WebElement address = driver.findElement(By.name("address"));
      address.sendKeys("Mumbai");
      System.out.println("Address:"+name.getAttribute("value"));
      //Gender
      WebElement male_rd = driver.findElement(By.xpath("//input[@id='male']"));
      System.out.println("Gender: male");
      male_rd.click();
      System.out.println(male_rd.isSelected()); //true
     //run the js code
Thread.sleep(2000);
JavascriptExecutor jse = (JavascriptExecutor) driver;
jse.executeScript("window.scrollBy(0,400)");
      //hobby
      Thread.sleep(2000);
      WebElement checkbox = driver.findElement(By.xpath("//label[normalize-space()='Traveling']"));
      checkbox.click();
System.out.println(checkbox.getText());
       //country
Thread.sleep(2000);
       WebElement drpCountryEle=driver.findElement(By.xpath("//select[@id='country']"));
```

```
Select drpCountry=new Select(drpCountryEle);
 drpCountry.selectByVisibleText("India");
 WebElement selectedOption = drpCountry.getFirstSelectedOption();
 System.out.println("Selected Country: " + selectedOption.getText());
 //city
 Thread.sleep(2000);
 WebElement drpCityEle=driver.findElement(By.xpath("//select[@id='city']"));
 Select drpCity=new Select(drpCityEle);
 drpCity.selectByVisibleText("Mumbai");
 WebElement selectedOption2 = drpCity.getFirstSelectedOption();
 System.out.println("Selected City: " + selectedOption2.getText());
//date
 Thread.sleep(2000);
 WebElement dob = driver.findElement(By.xpath("//input[@id='dob']"));
 dob.sendKeys("08/14/2001");
 // Get the entered date and print it
 String enteredDate = dob.getAttribute("value");
 System.out.println("Entered Date: " + enteredDate);
 WebElement button = driver.findElement(By.xpath("//button[normalize-space()='Submit']"));
 button.click();
driver.quit();
     }
```

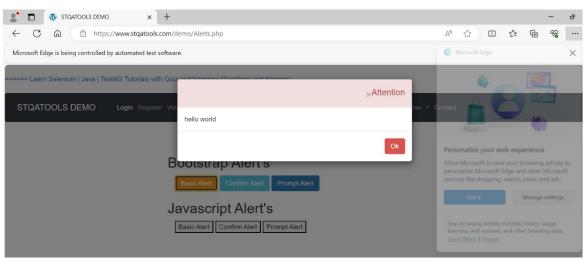

}

Output:

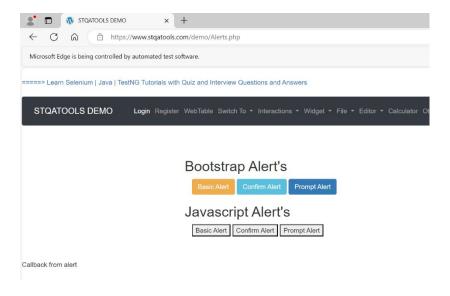

- 1. Here is the pic of console.
- 2. First the url is launched, and basic alert is clicked > alert visible > clicked on alert.

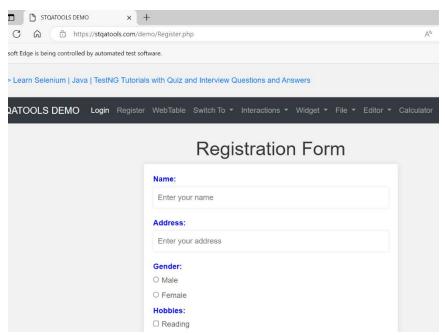

3. Alert box is opened.

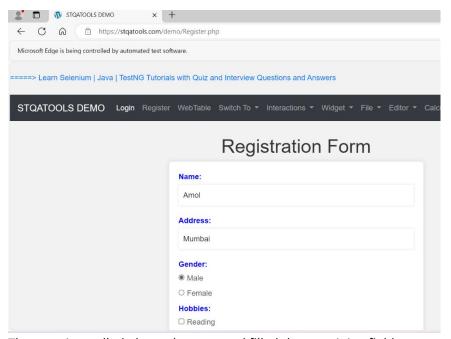

4. Alert box is closed.

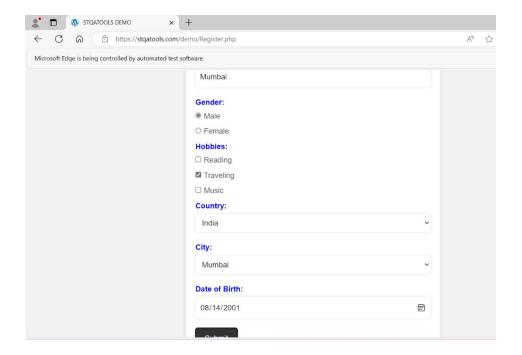

5. Navigate to another website that is registration form.

6. Form is filled out.

7. The page is scrolled down the page and filled the remaining fields.

8. All the tags are print in the console. Here is the image of it.
